Company Profile

Since 1992, ÜNLÜ GRUP has been supporting Turkish economy by production and export in textile, construction and foreign trade in its 26,000 m^2 facility in Istanbul\Sancaktepe with more than 1500 employees. SİGMA ELEKTRİK, which entered electricity sector with automatic fuse production in 1993, continues its operations under ÜNLÜ GRUP since 2009 in its factory in Istanbul\Sancaktepe with more than 320 expert staffs.

SİGMA ELEKTRİK serves both Turkish and global markets with its domestic production since 1993.

Thanks to the power that comes from its expert staff, SİGMA ELEKTRİK serves Low Voltage Switchgear Products sector, mainly with LV Circuit Breakers, Miniature Circuit Breakers, Residual Current Circuit Breakers, LV Current Transformers, Fuse Switch Disconnectors, NH Fuses, Automatic Transfer Switches, LV Contactors and with other various LV Protection and Measurement Devices in seven regions of Türkiye through its dealership network. Besides, with a commitment to quality and competitive pricing, it has secured significant market shares through its distributors in more than 50 countries in Europe, South America, Africa, Asia, Australia and the Middle East.

SİGMA ELEKTRİK has also many government approvals for projects in and abroad, participating and being granted with approval certificates.

SİGMA ELEKTRİK as a global company participates every year in worldwide known fairs such as Frankfurt Light and Building Fair, Messe Hannover, Middle East Energy in Dubai, Asean Super 8 Fair in Malaysia, Elcom in Ukraine and many others.

SİGMA ELEKTRİK, having various quality certificates including especially TSE, has expanded the certificate range by attaining international ASTA certificate recently. In addition to those certificates, SİGMA ELEKTRİK executes all work processes under ISO9000 quality assurance. Quality and customer satisfaction are the priorities of SİGMA ELEKTRİK. Therefore, all input raw materials are tested in laboratories that possess the latest version of test instruments, according to international standards; only after they pass the regarding tests, they are dispatched to production. Likewise, process control is executed throughout the whole production phases in accordance with quality criteria, and the products are transferred to customers only after their final quality inspection just before the shipment.

LV MOULDED CASE
CIRCUIT BREAKERS

The most important function of compact switches, also known as circuit breakers, is to protect the circuit in short circuit and overload situations, as well as to enable on-off operations of the circuit. At the same time, when used with the combination of leakage current protection relays and toroidal transformers, they protect the circuit against leakage currents.

- 1, 2, 3 and 4 poles
- Rated currents from 16A to 1600A
- 20kA, 25kA, 36kA, 50kA and 70kA breaking capacity
- Thermal-magnetic adjustable and fixed type options
- Short circuit interruption time thanks to the limiter feature
- Additional protection and control functions thanks to their compatibility with accessories (motor mechanism, trip coil, low voltage coil, connection terminal block, extension bar set, rotary extension arm, rotary control arm, mechanical padlock apparatus, auxiliary contact, alarm contacts)
- Highly durable body design with BMC body

LV AIR CIRCUIT **BREAKERS**

Air type power circuit breakers are designed as main breaker to protect electrical equipment against overload currents, short circuit currents and ground faults. They are suitable for use in power plants, factories, mines and smart building distribution systems, especially in buildings that are expected to draw high loads. When equipped with a motor mechanism, they are ready to get shut off at any time.

- 3 and 4 poles
- 80kA,100kA and 120kA short circuit breaking capacity
- Rated current from 630A to 6300A
- 1000V AC rated insulation voltage
- Possibility of maintenance and repair without cutting off system power with draw-out types
- Possibility to monitor phase voltages and phase currents on the LCD screen
- Showing phase information where the error occurred

AUTOMATIC
TRANSFER SWITCHES

Automatic transfer switches are devices that automatically transfer the load from one power source (mains, UPS, generator, etc.) to another power source (mains, UPS, generator, etc.), allowing them to cut, transmit, carry and isolate the current. They are used to carry out load transfers safely in areas where power outages are frequent, where uninterrupted power is needed and where the outage would cause great damage (hospitals, shopping malls, banks, factories, residences, etc.).

- Rated current from 32A to 3200A
- 3 different product ranges with Automatic Fuse, Thermal Magnetic Switch and Load Breaker types
- Possibility of adjusting transfer times (optional)
- Ability to protect the system against overvoltages and undervoltages caused by the source

RESIDUAL CURRENT
CIRCUIT BREAKERS

Residual current protection switches are protection equipments that help protect living beings from the harmful effects of electrical energy. RCCBs prevent from possible dangers by opening the circuit in case of a leakage current in the system, in order not to endanger the lives of living beings and to prevent from damage to the devices in the system.

- Product diversity in AC, A and B types
- Life (human protection) protection function at 10mA and 30mA, installation (fire protection) protection function at 100mA and 300mA
- 2 and 4 pole product variety
- 6kA and 10kA short circuit breaking capacity
- Rated current from 16A to 125A
- Delayed types, AC type at 300mA and A type at 300mA
- Test button that allows testing electrical and mechanical operability
- Double indicator design

Auto/Manu/Lock **Operation Mode**	**Auto:** Auto reclose function in work condition, as well as both open & close contacts work well.
	Manu: Auto reclose function doesn't work, both open & close contacts doesn't work as well.
	Lock: the device won't reclose after locked with hole diameter is 4.5mm, even manually.
Displays	**Green & Long Bright:** Normal work
	Red & flash(1time/1s): Auto-reclosing
	Red & Long Bright: Locked, auto reclose function and both open & close contacts doesn't work
Release "LOCK"	After visit at site and solved the faulty problem, the electrician needs to switch "AUTO" to "MANU"and "AUTO"again;

LV SURGE PROTECTION **DEVICES**

Surge arresters are protection equipments that discharge excessive voltage occurring in energy transmission lines to the ground. They act as open circuit when no pulse passes through it and provide isolation between active circuit elements and ground. When exposed to a voltage pulse, they increase their impedance within nanoseconds, act as closed circuit, and transmit the pulse current to the ground.

- Product diversity in B, C, B+C and D types
- 5kA, 40kA and 100kA short circuit breaking capacities
- 1, 2, 3 and 4 poles
- Possibility of remote monitoring with auxiliary contact function

Note: The LV Surge Protection devices are offered with signal contact except B type.
Note: Connection cross-sections are shown as min.

Selection of cable cross-section

Connection between the energy supply and the surge arrester: In post-meter input connections, the cable must have at least the same cross-section as the cable coming from the upper circuit. In pre-meter connections, phases and neutral should be 10 mm² in the main panel and ground should be 16 mm².

Surge arrester ground connection:

If there is no lightning rod, the minimum cross-section should be 4 mm², and if there is a lightning rod, it should be minimum 10 mm². However, it is recommended to choose a larger cross-section of 10-20 mm². Standard terminal connection for single-core sections max. 35mm², max. in multi-core sections. 25mm² connection can be made.

ATTENTION !!!

L/N EXPRESSION INDICATES THAT PHASE OR NEUTRAL CAN BE CONNECTED TO THE TERMINAL BLOCKS. SINCE THE TERMINAL BLOCKS HAVE SHORT CIRCUIT FROM THE INTERNAL SIDE, **ONLY PHASE** OR **ONLY NEUTRAL** CAN BE CONNECTED.

POWER **CONTACTORS**

Contactors are switching elements that work according to the electromagnetic field principle that controls the opening and closing of the electrical circuit.

They allow remote control of electrical facilities such as electric motors, compensation and heating systems via cable. When used with thermal relays, they protect facilities and devices in the system against overload currents.

- 3 and 4 pole product options
- Wide range from 9A to 800A
- Wide coil options (24, 42, 48, 110, 230, 400, 415 AC/DC)
- Wide product range, including power, modular (silent), 6-pole and 8-pole changeover, compensation and mini type contactors

LV CURRENT
TRANSFORMERS

Current transformers are measurement transformers used to measure the current passing through the circuit when high currents cannot be measured directly by measuring instruments.

Sigma current transformers convert primary currents from 20A to 5000A into secondary current (5A value) with a high accuracy class, while offering both space-saving and economic solutions with their very compact dimensions.

- Primary currents between 20A - 5000A
- Class 0.2 - 0.2s- 0.5S - 0.5 - 1 - 3 measurement accuracy
- High reliability thanks to the test report of each product
- Product variety including split core, mini, micro, with and without busbar, round and narrow types
- Sealable models
- Special production possibility in accordance with project demands

Determination of Current Transformer's Power

The below formula can be used to determine current transformer's power. The most important matter is; determined power of current transformer should not exceed from maximum load of transformer power and not less than 1/4 of rated power. Otherwise, It may cause fault measuring or create fault protection signals.

$P_S = P_A + P_K + P_T$

P_S : Total Secondary Power (VA)

P_A : Secondary rated Power (VA)

P_K : Dielectric Cable Loss (VA)

P_T : Contact Loss (considered 0.5 VA)

P_K= (Isn2x2L) / S x 56

Isn = Secondary Rated Current (A)

L = Length of the cable on secondary side (m)

S = Section of copper cable (mm²)

56 = Conductivity of Copper Cable (m/ohm x mm²)

Distance Between Current Transformer and Load (meter)	Cable Loss (P_K) According to Secondary Cable Section (VA)			
	2.5 mm²	4 mm²	6 mm²	10 mm²
1m	0.36	0.22	0.15	0.09
2m	0.71	0.45	0.3	0.18
3m	1.07	0.67	0.45	0.27
4m	1.43	0.89	0.6	0.36
5m	1.78	1.12	0.74	0.44
6m	2.14	1.34	0.89	0.54
7m	2.5	1.56	1.04	0.63
8m	2.86	1.79	1.19	0.71
9m	3.21	2.01	1.34	0.8
10m	3.57	2.24	1.49	0.89

**You can use this formula to calculate cable loss which apart from above mentioned cable length.

Power of devices connected to current transformers (PA)

Current error and Phase shifting limits (According to IEC 60044-1, IEC 385 class 0.1-0.2-0.5-1)

Accuracy Class	Current (proportion) error ± percentage for the rated currents given below				± Phase shifting for rated current percentages given below							
					Minutes				Centi-radians

When current fault and phase shift at rated frequency varies between 1/1 and 1/4 of the secondary load, rated load, the values in the table should not be exceeded.

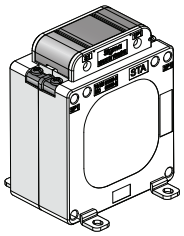
STA Type Summation Current Transformer



When the currents in different feeders need to be metered with single meter or instrument, a summation transformer can be used. Summation current transformers are designed for summation of several synchronous A.C. currents in same phase belt.

The secondary circuits of the main C.Ts are to be connected to the corresponding marked primary terminals of the summation C.T. If the ratios of the main CTs are not equal, in order to obtain a correct vectorial sum, it is necessary to specify the ratio values of the individual main CTs.

In consumer installation, where there are more than one feeder, it is more economical to use summation metering and for this purpose, summation CT is required. 2 to 12 different currents of different feeders in the same phase can be summed. The standard primary & secondary currents are 5 or 1 amp.

TYPE	Primary (A)	Rated power (VA) max	
		Class 0,5	Class 1
STA-2	5+5/5	10	15
STA-3	5+5+5/5	10	15

Example:

Main C.T. : $\frac{300A}{5}$, $\frac{100A}{1}$, $\frac{100A}{5}$

Summation C.T. : $\frac{5+1+5}{5}$ A

Result C.T. : $\frac{300+100+100}{5}$: 100 “Ratio”

(Type STA-3) One phase (R) of the three-phase A, B, C groups are shown in the picture

RELAYS

Relay is a switch model that can control the circuit electrically. The main reason why relays working with an electromechanical system are used in electrical and electronic circuits is that they can control high currents with low currents. Relays are generally used in control circuits.

- Level Control Relay: In monitoring environments such as tanks, water tanks and wells containing conductive liquids
- 3-Phase Voltage Relay: In protecting devices and motors from overvoltage and undervoltage
- Asymmetrical Cycle Time Relay: General room ventilation, periodic dehumidification, lighting control, circulation pumps, signage, etc. in areas
- Star-Delta Delayed Time Relay: Providing the required time interval during the transition from star connection to delta connection
- Single Function Time Relay: It is used in applications where function and time requirements are known.

COMPENSATION **PRODUCTS**

Reactive penalty is a type of penalty system applied when the reactive power generated in electricity consumption exceeds a certain limit. Compensation is a method used to balance reactive power consumption and correct the power factor.

Thanks to compensation products, businesses can;

- Prevent from penalty payments by minimizing the reactive energy drawn from the network
- Reduce in electrical losses and voltage drops
- Make energy systems work more efficiently
- Ensure energy efficiency by reducing energy losses
